SUMMARY

Product-minded data systems engineer building real-time analytics and operational systems. Experienced owning end-to-end workflows — from event tracking and ingestion to dashboards, alerts, and automation — and partnering with product and operations to ship measurable improvements quickly. Curious and hands-on; I iterate fast with stakeholders.

WORK EXPERIENCE

Data Engineer, *Aramark*

Philadelphia, PA | May 2025–Present

- Launched an anomaly-detection and alerting system (SQL + dbt-derived feeds) consumed by operations teams (1,000+ alerts/day); surfaced fraud and hardware-health issues, improving match accuracy by 35% and reducing manual investigation time.
- Built event-driven ingestion and processing systems (Snowpipe, Snowflake Streams, Azure Event Grid) that power near-real-time decision-making and operational workflows across 2,000+ locations, reducing data latency and enabling automated responses.
- Consolidated fragmented reporting into a modular analytics platform (dbt) producing production-ready datasets and event feeds used for experimentation, automation, and operational visibility.
- Translated ambiguous business problems into production systems by partnering with product, operations, and analytics; iterated on workflows and measurement based on stakeholder feedback.
- Implemented monitoring and on-call support for core data systems and led rapid prototyping cycles to move fixes from concept to production under tight timelines.

Software Engineer, *WebstaurantStore*

Remote | May 2024–May 2025

- Delivered a test-automation and release platform (Java, Selenium Grid, Azure DevOps CI/CD) that increased release velocity and confidence, enabling faster feature rollouts while reducing regression cycles by 50%.
- Built validation queries and monitoring that caught production defects before release, lowering post-release defects and improving product quality.
- Partnered with QA and engineering teams to define release-health metrics and improve visibility into deployment quality.

Software Developer Intern, *National Public Radio (NPR)*

Washington, DC | June 2022–August 2022

- Owned and launched the NPR One consumer landing page end-to-end using HTML5, CSS, and JavaScript; improved discoverability with structured metadata and conversion-focused CTAs reaching millions of users.
- Shipped Apple Smart App Banner across large-scale PHP templates using feature flags and staged rollout to measure impact and reduce risk.
- Deployed through Git workflows with Docker and Kubernetes pipelines and collaborated cross-functionally on release validation and instrumentation.

PRODUCTS & PROJECTS

Portfolio Instrumentation Insights

Personal Project | *TypeScript, PostHog, Next.js*

- Implemented site-wide event tracking and an insights pipeline that surfaces user flows, conversion funnels, and engagement metrics to admin dashboards (events include ‘resume_clicked’, ‘wave_submitted’, ‘social_link_clicked’). Built dashboards and lightweight alerts that improved visibility into ex
- Rapidly prototyped visualizations and shipped small experiments to production within days.

HackKit — Real-time Hackathon Scoring

Open Source Project | *Node.js, MongoDB, Docker*

- Designed and launched a real-time scoring product for hackathons; built aggregation pipelines and resilient MongoDB schemas to handle live scoring for 5,000+ participants with zero downtime.
- Owned product requirements, judge workflows, and on-call reliability during events; instrumented metrics and dashboards to help organizers spot anomalies and optimize judging.

justateit

Personal Project | *Full-stack (Next.js, iOS)*

- Built an early-stage dish-tracking product focused on taste preferences and repeat-visit workflows; implemented front-end flows and backend event tracking to measure engagement and return-rate improvements. Live demo: justateit.com.

wikigraph

Personal Project | *Data Viz, Nodes*

- Built an interactive Wikipedia visualization that maps browsing sessions into node graphs; implemented front-end visualization and session tracking to surface browsing depth, content relationships, and engagement paths.

LEADERSHIP

Director, *sunhacks (ASU)*

Tempe, AZ

- Scaled ASU's flagship hackathon to **600 attendees (2× YoY growth)**; managed a **\$40K budget**, led **15** volunteers, and built scalable check-in and judging workflows from scratch.
- Closed sponsorships with **Amazon, Garmin, and General Dynamics** through direct outreach and relationship-building.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences
Arizona State University

May 2025
Tempe, AZ | **GPA: 4.00**

TECHNICAL SKILLS

Core: SQL, Python, dbt, Snowflake, event-driven ingestion (Snowpipe, Event Grid)

Product Data: event instrumentation, behavioral analytics, experimentation pipelines, real-time event processing, APIs

Infrastructure: Azure, Docker, Kubernetes, CI/CD, monitoring and alerting

Platforms & Storage: PostgreSQL, SQL Server, MongoDB

Languages: TypeScript, Java, Python

Other Tools: Git, PostHog, Next.js
