WORK EXPERIENCE

Data Engineer, Aramark

Philadelphia, PA | May 2025–Present

- Engineered and deployed 15+ production data pipelines across Snowflake, dbt, Azure, and Palantir Foundry, ingesting POS, payment, healthcare, and operational data through SFTP → Azure Blob → Snowflake → dbt pipelines.
- Architected and standardized reusable data-engineering infrastructure across 8+ production dbt repositories and multiple Azure applications, introducing jobs-as-code, shared dbt macros, cookiecutter templates, API-ingestion container patterns, and automated failure notifications; eliminated silent production failures and reduced alert noise through 3x-consecutive-failure detection.
- Designed and shipped a merchant-level payment reconciliation data product and Palantir dashboard across POS, gateway, and processor data, generating 1,000+ alerts/day across 2,000+ locations and improving reconciliation accuracy by 35%, enabling self-service investigation for analytics and audit teams.

Software Engineer, WebstaurantStore

Remote | May 2024–May 2025

- Delivered a test-automation and release platform using Groovy, Selenium Grid, and Azure DevOps CI/CD that reduced regression cycles by 50% and elevated release confidence.
- Developed validation tooling, SQL-based test workflows, and monitoring systems that surfaced production defects pre-release and bolstered deployment reliability.
- Partnered with QA and engineering teams to improve release visibility, automate repetitive testing workflows, and streamline CI/CD processes.

Software Developer Intern, National Public Radio (NPR)

Washington, DC | June 2022–August 2022

- Owned and launched the NPR One consumer landing page end-to-end using HTML5, CSS, and JavaScript; boosted discoverability with structured metadata and conversion-focused CTAs.
- Shipped Apple Smart App Banner across large-scale PHP templates using feature flags and staged rollout to measure impact and reduce risk.

PROJECTS

JustAteIt

Personal Project | Expo, Next.js, TypeScript

- Built a cross-platform dish-tracking application with Expo and Next.js, designing data models and analytics workflows around repeat-visit behavior, taste preferences, and user engagement.

HackKit

Open Source | Node.js, MongoDB, Docker

- Contributed to a real-time hackathon scoring platform with Node.js, MongoDB aggregation pipelines, and Dockerized backend services, supporting live judging, scoring, and leaderboard workflows.

Portfolio Instrumentation & Insights

Personal Project | TypeScript, PostHog, Next.js

- Engineered an event-tracking and analytics pipeline for my portfolio using TypeScript, Next.js, and PostHog, modeling visitor funnels, engagement, traffic sources, and conversion events through custom dashboards and alerting.

LEADERSHIP

Director, sunhacks (ASU)

Tempe, AZ

- Scaled ASU's flagship hackathon to **600 attendees (2× YoY)**, managed a **\$40K** budget, led **15** volunteers, and closed sponsorships with **Amazon, Garmin, and General Dynamics**.

EDUCATION

B.S. in Computer Science, Minor in Media Arts and Sciences
Arizona State University

May 2025
Tempe, AZ | **GPA: 4.00**

TECHNICAL SKILLS

Languages: SQL, Python, TypeScript, Groovy, Java

Data & Platforms: Snowflake, dbt, PostgreSQL, MongoDB, PostHog

Cloud & Infrastructure: Azure, Docker, Kubernetes, Azure Container Apps, Event Grid, Logic Apps, CI/CD

Frameworks: Next.js, Node.js, React, Expo
